# ReachFree ID™
a Portal TI® House Account Application

- RFID system technology increases throughput

- Build volume through subscription-based accounts

- Offer fleet customers post-billing based on usage

- Tamper-resistant window tags provide secure accounts

- Recurring billing functions available through Mercury Payment Systems

ReachFree ID Components:

- **RFID Window Tag** - sample of the .8" x 4" tag is shown on the right

- **Antenna** - approximately 8" square and 1.5" deep

- **Mounting Bracket** - mounting bracket accommodates a 3" to 8" diameter pole

- **Power Supply & Interface Board** - installed in the Portal TI

Introducing **ReachFree ID**, a Portal TI house account application designed to build car wash volume and increase throughput with secure, subscription-based wash accounts. Through the use of an RFID tag, the system approves the account holder and allows the vehicle to proceed through the gate into the tunnel or in-bay automatic.

A typical account would be set up with an unlimited number of washes for a monthly pass fee (with a max use per day restriction). The tags can also provide a secure method to authorize fleet account customers based on usage. The account holder may utilize a recurring billing function, offered through Mercury Payment Systems.

If window tags cannot be used due to state regulations or windshield restrictions, a metal mounting tag is available.
